

Calibrate Mimio Interactive Projector

Calibration is the process of teaching the Mimio Projector and the computer where the desktop computer is on the whiteboard. You do not need to go into the Mimio Preferences each time you want to calibrate the board.

Click the Interactive button (second from bottom on the right side) on the MimioStudio Toolbar to launch the targets.

Press the center of the first target and then each subsequent target as it appears. Once you have pressed all 9 targets your computer screen will reappear and you will be ready to use the board interactively.
