

Chapter 4 – Reactions in Aqueous Solutions – End of Chapter problems (pages 158 – 164): 44, 45, 50, 54, 60, 62, 64, 72, 74, 78, 80, 86, 93, 98, 114, 118, 126, 128, 132, 142, 149, 152.

## I. Solutions

A. Solution - \_\_\_\_\_.

1. Solute – substance with \_\_\_\_\_ amount; substance being \_\_\_\_\_
2. Solvent – substance with \_\_\_\_\_ amount; substance doing the \_\_\_\_\_
3. Aqueous solution – solvent is \_\_\_\_\_, most common for us

B. Electrolyte – substance when dissolved in water \_\_\_\_\_

1. substance splits into \_\_\_\_\_ which “\_\_\_\_\_” the charge
2. \_\_\_\_\_, positive ion, is attracted to \_\_\_\_\_ electrode (\_\_\_\_\_)
3. \_\_\_\_\_, negative ion, is attracted to \_\_\_\_\_ electrode (\_\_\_\_\_)
4. this movement acts as an \_\_\_\_\_
5. ionic substances “\_\_\_\_\_” into \_\_\_\_\_
6. molecular substances “\_\_\_\_\_” and form \_\_\_\_\_; examples are \_\_\_\_\_ and some \_\_\_\_\_

the  $\text{H}_3\text{O}^+$  is the \_\_\_\_\_ ion and is many times represented as  $\text{H}^+$  (I like the hydronium ion)

C. Nonelectrolyte – substance when dissolved in water \_\_\_\_\_

D. \_\_\_\_\_ dissolves many \_\_\_\_\_ substances due to the \_\_\_\_\_ and \_\_\_\_\_ regions of molecular water (dipole, hydrogen bonding, intermolecular attractive forces)

1. \_\_\_\_\_ – water surrounds ions aligning \_\_\_\_\_ regions around \_\_\_\_\_ ions and \_\_\_\_\_ regions around \_\_\_\_\_ ions.

E. Some solution formations are “\_\_\_\_\_” and use a \_\_\_\_\_ arrow to represent that the reaction can move \_\_\_\_\_ AND \_\_\_\_\_. When a solution process is reversible it reaches an \_\_\_\_\_ (the rate of the \_\_\_\_\_ reaction \_\_\_\_\_ the rate of the \_\_\_\_\_ reaction). When a solution process is \_\_\_\_\_ the solute is not \_\_\_\_\_ dissociated or ionized. The \_\_\_\_\_ arrow represents \_\_\_\_\_ dissociation or ionization.

## 2. Precipitation Reactions

- A. Two aqueous solutions mix and an \_\_\_\_\_, \_\_\_\_\_, product is formed, called a \_\_\_\_\_
- B. Double replacement reactions also known as \_\_\_\_\_ reactions

- C. \_\_\_\_\_ is the \_\_\_\_\_ amount of a solute that will dissolve in a \_\_\_\_\_ amount of solvent at a specific \_\_\_\_\_.
- D. To determine which product is a \_\_\_\_\_, check \_\_\_\_\_ tables looking for \_\_\_\_\_ or \_\_\_\_\_ soluble products
- E. All \_\_\_\_\_ substances are strong \_\_\_\_\_ but are not \_\_\_\_\_ soluble...Hmm what does THAT mean?
- F. \_\_\_\_\_ Equation - the equation that uses complete whole unit formulas (molecular formulas) for each reactant and product
1.  $\text{AgNO}_{3(\text{aq})} + \text{NaCl}_{(\text{aq})} \rightarrow \text{AgCl}_{(\text{s})} + \text{NaNO}_{3(\text{aq})}$
- G. \_\_\_\_\_ or \_\_\_\_\_ Equation - the equation that shows \_\_\_\_\_ dissolved substances as \_\_\_\_\_
1.  $\text{Ag}^{+}_{(\text{aq})} + \text{NO}_{3}^{-}_{(\text{aq})} + \text{Na}^{+}_{(\text{aq})} + \text{Cl}^{-}_{(\text{aq})} \rightarrow \text{AgCl}_{(\text{s})} + \text{Na}^{+}_{(\text{aq})} + \text{NO}_{3}^{-}_{(\text{aq})}$
- H. \_\_\_\_\_ Equation - only shows ions that are \_\_\_\_\_ in the reaction (da Playas). Does not show the \_\_\_\_\_ ions (ions that sit on side lines and don't \_\_\_\_\_ in chemical reaction).
1.  $\text{Ag}^{+}_{(\text{aq})} + \text{Cl}^{-}_{(\text{aq})} \rightarrow \text{AgCl}_{(\text{s})}$
  2. The  $\text{Na}^{+}_{(\text{aq})}$  and  $\text{NO}_{3}^{-}_{(\text{aq})}$  are the \_\_\_\_\_ ions
3. Acid - Base Reaction
- A. \_\_\_\_\_ Acids - substances that produce  $\text{H}^{+}$  in aqueous solution
- B. \_\_\_\_\_ Bases - substances that produce  $\text{OH}^{-}$  in aqueous solution
- C. \_\_\_\_\_ Acids - substances that donate a proton in aqueous solution
- D. \_\_\_\_\_ Bases - substances that accept a proton in aqueous solution
- a.  $\text{HCl}_{(\text{g})} + \text{H}_2\text{O}_{(\text{l})} \rightarrow \text{H}_3\text{O}^{+}_{(\text{aq})} + \text{Cl}^{-}_{(\text{aq})}$   
ACID   BASE   ACID   BASE
- E. Acid Properties
1. \_\_\_\_\_
  2. \_\_\_\_\_ (indicators)
  3. \_\_\_\_\_
  4. React with \_\_\_\_\_ and hydrogen \_\_\_\_\_ (\_\_\_\_\_) to produce \_\_\_\_\_
  5. Aqueous solution is \_\_\_\_\_
- F. Base Properties
- a. \_\_\_\_\_ taste (\_\_\_\_\_)
  - b. Feel \_\_\_\_\_
  - c. Cause color \_\_\_\_\_ in plant \_\_\_\_\_
  - d. Aqueous solution is \_\_\_\_\_
- G. \_\_\_\_\_ acids have \_\_\_\_\_ proton / hydrogen to donate
- H. \_\_\_\_\_ Acids have \_\_\_\_\_ protons / hydrogens to donate
- a. Protons / hydrogens are donated \_\_\_\_\_ at a time
- I. \_\_\_\_\_ Acids have \_\_\_\_\_ protons / hydrogens to donate again one at a time.
- J. Strength of Acids
- a. Strong acids \_\_\_\_\_ donate proton and are also \_\_\_\_\_ electrolytes
  - b. The stronger the \_\_\_\_\_ the \_\_\_\_\_ the acid, Hmmm why is this so?

c. Strength of \_\_\_\_\_ - when the ratio of \_\_\_\_\_ to \_\_\_\_\_ is \_\_\_\_:\_\_\_\_ or greater the acid is \_\_\_\_\_.

d. Organic acids are \_\_\_\_\_

#### K. Strength of Bases

a. Metallic bases are \_\_\_\_\_

b. Non-metallic bases are \_\_\_\_\_

#### L. Acid - Base Neutralization Reaction

a. Reaction of acid and base in which \_\_\_\_\_ donated protons are \_\_\_\_\_.

b. General reaction

i. Acid + Base  $\rightarrow$  \_\_\_\_\_ + \_\_\_\_\_

ii. The salt is not \_\_\_\_\_ salt. A salt is the product of an acid base reaction consisting of the \_\_\_\_\_ of acid and the \_\_\_\_\_ of the base.

c. Example reaction

i.  $\text{HCl}_{(\text{aq})} + \text{KOH}_{(\text{aq})} \rightarrow \text{KCl}_{(\text{aq})} + \text{HOH}_{(\text{l})}$  (HOH =  $\text{H}_2\text{O}$ )

ii.  $\text{H}^+_{(\text{aq})} + \text{Cl}^-_{(\text{aq})} + \text{K}^+_{(\text{aq})} + \text{OH}^-_{(\text{aq})} \rightarrow \text{K}^+_{(\text{aq})} + \text{Cl}^-_{(\text{aq})} + \text{HOH}_{(\text{l})}$

iii.  $\text{H}^+_{(\text{aq})} + \text{OH}^-_{(\text{aq})} \rightarrow \text{HOH}_{(\text{l})}$

#### 4. Oxidation - Reduction Reactions

A. \_\_\_\_\_ transfer reactions

B. Oxidation is the \_\_\_\_\_ of electrons

C. Reduction is the \_\_\_\_\_ of electrons

D. \_\_\_\_\_ - Oxygen Is Loss Reduction Is Gain

E. \_\_\_\_\_ agent is the substance that has been \_\_\_\_\_

F. \_\_\_\_\_ agent is the substance that has been \_\_\_\_\_

G. \_\_\_\_\_ reactions can be written in \_\_\_\_\_ - reactions showing the \_\_\_\_\_ and \_\_\_\_\_ more specifically.

a.  $2\text{Mg}_{(\text{s})} + \text{O}_{2(\text{g})} \rightarrow 2\text{MgO}_{(\text{s})}$

b. OX:  $2\text{Mg} \rightarrow 2\text{Mg}^{+2} + 4\text{e}^-$  (each Mg lost  $2\text{e}^-$ )

c. RED:  $\text{O}_2 + 4\text{e}^- \rightarrow 2\text{O}^{-2}$  (each O gained  $2\text{e}^-$ )

d. The number of electrons lost \_\_\_\_\_ the number of electrons gained

H. The number of \_\_\_\_\_ transferred is determined using \_\_\_\_\_, also called \_\_\_\_\_.

a. \_\_\_\_\_ number - represents the number of \_\_\_\_\_ that have been lost or gained. If electrons are \_\_\_\_\_ the number is \_\_\_\_\_ (\_\_\_\_), if electrons \_\_\_\_\_ then it is \_\_\_\_\_ (\_\_\_\_). Sign must \_\_\_\_\_ be included and this signed number must be written directly \_\_\_\_\_ the chemical symbol.

b. But of course \_\_\_\_\_ must be followed.

i. Free elements' oxidation numbers are \_\_\_\_\_ since it has neither lost nor gained any electrons.

ii. The oxidation number for monatomic ions is \_\_\_\_\_ to its charge

iii. The oxidation number for oxygen is usually \_\_\_\_\_ except in peroxide where it is \_\_\_\_\_.

- iv. The oxidation number for hydrogen is usually \_\_\_\_\_ unless combined with a metal then it is \_\_\_\_\_.
- v. Fluorine is ALWAYS \_\_\_\_\_.
- vi. In \_\_\_\_\_ molecules the sum of the oxidation numbers of the components is equal to \_\_\_\_\_.
- vii. In \_\_\_\_\_ ions the sum of the oxidation numbers of the \_\_\_\_\_ is \_\_\_\_\_ to its \_\_\_\_\_.

#### I. Types of REDOX Reactions

- a. \_\_\_\_\_ / \_\_\_\_\_ / \_\_\_\_\_ reactions
  - i. The single elements either \_\_\_\_\_ or \_\_\_\_\_ electrons to form the compound.
- b. \_\_\_\_\_ Reactions
- c. \_\_\_\_\_ Reactions
  - i. Must use \_\_\_\_\_ to determine if single element is \_\_\_\_\_ enough to replace \_\_\_\_\_ in \_\_\_\_\_. (See figure 4.16 page 139)
  - ii. Halogen activity series is \_\_\_\_\_ on \_\_\_\_\_.
- d. \_\_\_\_\_ Reactions
  - i. One element is \_\_\_\_\_ oxidized and reduced
    - 1.  $2\text{H}_2\text{O}_2(\text{aq}) \rightarrow 2\text{H}_2\text{O}(\text{l}) + \text{O}_2(\text{g})$
    - 2. Oxygen in hydrogen peroxide is \_\_\_\_; in water is \_\_\_\_ thus has been \_\_\_\_\_; in elemental oxygen is \_\_\_\_ thus has been \_\_\_\_\_.

#### 5. Concentrations of Solutions

- A. The amount of \_\_\_\_\_ present in a given amount of \_\_\_\_\_ or \_\_\_\_\_.
- B. For now we use \_\_\_\_\_ = moles of \_\_\_\_\_ per liter of \_\_\_\_\_
  - a. This only refers to the amount of \_\_\_\_\_ that is actually originally \_\_\_\_\_ in water.
- C. How to make a \_\_\_\_\_ solution from \_\_\_\_\_ solute
  - a. Calculate amount of \_\_\_\_\_ needed to make the desired \_\_\_\_\_
  - b. Measure the \_\_\_\_\_ of \_\_\_\_\_ needed and transfer to \_\_\_\_\_ flask
  - c. Fill flask \_\_\_\_\_ with \_\_\_\_\_ and \_\_\_\_\_ until solid is \_\_\_\_\_
  - d. Add enough \_\_\_\_\_ to fill flask to \_\_\_\_\_
  - e. Knowing the amount of water added is \_\_\_\_\_ necessary
- D. How to make a Molar solution from \_\_\_\_\_ solution
  - a. \_\_\_\_\_ - determine amount of more \_\_\_\_\_ solution needed to make \_\_\_\_\_ concentration of \_\_\_\_\_ solution.
  - b. Easiest way is to use \_\_\_\_\_ = \_\_\_\_\_

#### 6. Gravimetric Analysis

- A. Analytical technique based on measurement of \_\_\_\_\_
  - a. Like \_\_\_\_\_

- b. Sample of substance of unknown composition is dissolved in water and then reacts to form a known precipitate. That known precipitate is massed. Knowing the formula and mass of the precipitate the mass of the component from unknown can be calculated and then the formula of the original unknown can be determined. Sounds pretty easy, huh.

7. Acid Base Titration

- A. Solution of \_\_\_\_\_ concentration (\_\_\_\_\_) is mixed with sample of \_\_\_\_\_ concentration.
- B. Basically \_\_\_\_\_
- C. To perform this reaction \_\_\_\_\_ must be used to determine the \_\_\_\_\_ point - all acid and base \_\_\_\_\_ react

8. REDOX Titration

- A. Same as \_\_\_\_\_ - \_\_\_\_\_ titration except \_\_\_\_\_ point is where the reducing agent is \_\_\_\_\_ oxidized by the oxidizing agent
- B. Complete reaction
- C. \_\_\_\_\_ are usually one of the \_\_\_\_\_ turning colors as oxidized or reduced.
